Title: When Breath Becomes Air
Arthur: Paul Kalanithi

Summary:

The book is divided into 3 parts. The **first** part recounts different incidents Paul encountered during his years as a doctor who specializes in treating the brain. It offers readers a sneak-peak into the day-to-day operation of a hospital, and of course, some tear-provoking cases.

The **second** part of the book begins after Paul was diagnosed with stage IV lung cancer. All of a sudden, his role changed from a doctor to a patient and was struggling to live. Being able to now see the end of life, he contemplated on the meaning of life. He thought of answers to questions like what makes life worth living in the face of death.

The **last** part is the epilogue written by Paul's wife after his death. It focused on the procedures and ceremonies done after Paul's death. When readers all expected this part to be mournful, the calmness weaved through his wife's words soothes the readers' emotions.
